

PRESS RELEASE

October 2021

Embracing the key challenges of CSR (Corporate Social Responsibility), and inspired by the Sustainable Development Goals (SDGs) defined by the United Nations, the RÉMY COINTREAU group is committed to a policy that affects all aspects of its business:

- preservation of its terroirs (sustainable growing methods, preserving the specific characteristics of terroirs, etc.),
- developing the talents of its 1,900 employees (promoting well-being at work, gender equality, non-discrimination, sustainable procurement, etc.)
- respect for the weather (combatting global warming, preservation of resources, etc.).

In this context, by the end of the year, the RÉMY COINTREAU GASTRONOMIE department will take a significant step forward in terms of innovation and respect for the environment by replacing its current PET bottle with an R-PET version: **this new packaging is made from 100% recycled material and is also 100% recyclable**. A decisive development in terms of reducing the consumption of raw materials in our packaging and reducing the carbon footprint of our bottles.

This will not affect the bar codes on our labels, boxes or bottle caps which will all stay the same. Only the bottle itself will change, having a slightly greyer tint than the current one.

The new packaging will be used as and when stocks of the old bottle run out, so we cannot provide a specific date as to when this will be.
